Sebastian Herrera Claro

JUNIOR FRONTEND / FULL-STACK DEVELOPER

Cartagena, Colombia · Remote sebastianherrerajr@gmail.com +57 318 802 2279 github.com/soushiki LinkedIn

SUMMARY

Systems engineer and frontend developer who builds web apps for real, everyday problems. React is my main tool. I've also built a Spring Boot + PostgreSQL API with an Angular client, and Python tools for document processing. I write tests for what I ship, keep the code organized (MVVM, pure logic separated from UI) and pay close attention to detail. I work well asynchronously and in writing.

PROJECTS

Minoscreto: document anonymizer for AI

Live · Code

React · Vite · Vitest · Web Workers · .docx / pdf.js

- Replaces names, IDs and addresses in Word and PDF files before they're pasted into an AI, then restores the real names in the answer. Everything runs in the browser, so the document never leaves the computer.
- MVVM structure: pure detection logic with no React, view-model hooks with a reducer for state, and presentation-only components. Heavy detection runs in a Web Worker to keep the UI responsive.
- 117 automated tests across 11 suites (Vitest) covering detection rules, .docx output and the UI. Ships as one self-contained HTML file.

Formato Médico: physician's forms app

React · jsPDF · Capacitor · Android

- Fills a doctor's lab orders, prescriptions and certificates as PDFs that match the printed forms exactly, with an offline ICD-10 diagnosis search.
- One React codebase for the web and an Android app (Capacitor), built from the doctor's own feedback.

Stockroom: inventory and accounting prototype

Java · Spring Boot · JPA · PostgreSQL · Angular · Docker Compose

- REST API in Spring Boot with JPA and input validation over PostgreSQL, plus an Angular frontend, run together with Docker Compose.

Ingresos App: restaurant bookkeeping from receipts

Code

Python · Flask · OCR · Excel export

- Local web app that reads photos and PDFs of a restaurant's receipts and POS cash-closing reports, builds the day's accounting ledger and exports it to Excel for the accountant.
- Cross-checks the POS closing report against the receipts and flags exactly which receipt is missing.

Smaller React apps

Restaurant site · NASA APOD · Notes

React · Next.js · Firebase · Redux · REST APIs · Tailwind · responsive HTML/CSS

- Responsive restaurant landing page, a Markdown notes app with Firebase auth and database, a NASA APOD client with local caching, a Spotify playlist builder and a Reddit client with Redux.

SKILLS

Frontend	React, JavaScript, HTML, CSS, responsive design, Vite, Next.js, Redux, Tailwind, Angular (basic)
Backend	Node.js, Java (Spring Boot, JPA), Python, REST APIs
Data	PostgreSQL, MySQL, MongoDB, Firebase
Testing & tools	Vitest, unit and UI tests, Git/GitHub, Docker Compose, Netlify
Languages	Spanish (native) · English (C2)

EDUCATION

Systems Engineering · Universidad de Cartagena Mar 2019 – Mar 2025
